

You work for XYZ Corporation. Their application requires a storage service that can store files and publicly share them if required. Implement S3 for the same. While migrating, you are asked to perform the following tasks:

1. Ensure that any amount of data can be stored on the cloud and can be retrieved at any time from anywhere on the web.
2. Manage the lifecycle of data that is being stored on the cloud so that it gets automatically deleted after 75 days.
3. Retrieve the old version of a file if the content of the current version of that file is compromised accidentally.
4. Host your static website on the AWS cloud using the domain name created in Module 3 assignment.
5. Display an error page if proper domain name is not used while attempting to access the company's website

Answer : The above task is nothing but all the s3 buckets tasks including one task.

aws - Yahoo Search ResultsxUpload objects - S3 bucket sasi96x+

s3.console.aws.amazon.com/s3/upload/sasi96?region=ap-south-1

Objects (3)

Objects are the fundamental entities stored in Amazon S3. You can use [Amazon S3 inventory](#) to get a list of all objects in your bucket. For others to access your objects, you'll need to explicitly grant them permissions. [Learn more](#)
